

BUSINESS TESTIMONIAL FOR ECO-EVOLUTION

Project: Proposed leisure centre and swimming pool at Ballyhack, Duncannon, Co. Wexford.

My client: Mr. Ben Hogan, Ballygarrett, Co. Wexford.

To whom it may concern,

I wish to confirm that at the planning and design stages of the above project I requested Frank and Mary Gethings of Eco-Evolution design the most environmentally friendly energy solution for the running of the proposed leisure centre. I asked that all of the essential heating, water heating and air conditioning services be designed with the most environmentally friendly systems.

Within a couple of days of talking with Mary, Frank visited my offices and educated me on the best approach. Frank and Mary have a very friendly and approachable manner which makes them very easy to deal with.

I agreed to run with his excellent advice and in a matter of days Frank had a full eco-friendly solution for what is by no means a simple building to service. The solution included some very innovative thinking with regard to the heating of the pool, and array of solar panels and the use of a heat pump system. My client was equally impressed with the energy solutions and I submitted all of Eco-Evolution's details as part of the planning application.

Frank and Mary form an excellent team and provide excellent advice and most importantly provide the information efficiently and on time. The products which they can provide are without a doubt the best on the market and it is clear that a lot of time and effort is spent by the company in researching and ensuring they have the best products at their disposal.

I have no doubt that given the notable shifts in attitude towards the use of these products, coupled with the fact that they are now reasonably priced, that Eco-Evolution is a company that will go from strength to strength in the coming years.

I would strongly recommend them for all your 'eco' needs.

Yours sincerely,

Michael Molloy
